

Airmate Airport Flight Tracking

With Airmate Airport, airport operators and handlers can now track in real time their IFR customer flights, allowing to better serve them and anticipate their needs.

Directly from your smartphone or tablet (already available on iPhone/iPad, soon available on Android):

- View incoming and outgoing traffic to your airport (yesterday, today and tomorrow)
- View all planned incoming and outbound traffic and their status: planned departure time, slot allocated, flight status (flight plan filed, in flight, landed).
- Be informed of any unexpected delay to an expected flight, either because a slot has been allocated, or because the departure has been delayed.

To the difference of other trackers based on ADS-B reception that will display only aircrafts in flight, Airmate Airport gets its traffic data in Europe directly from Eurocontrol: you could then check the status of your customer flights even before they depart and be informed in advance of any potential delay (such a slot allocated).

Airmate Airport is **reserved to the use of airport operators and handlers**, the flight tracking information is to be used only for flight planning and flow control management.

To purchase to Airmate Airport one year subscription:

- Install the free Airmate app on your iPhone or iPad
- Search your airport, view its details, click on the Traffic tab
- Purchase the Airmate Airport feature online

You could also use the subscription form below to purchase one or several subscriptions and get your company invoiced.
